SUMMARY

MSc Statistical Data Science graduate (University of Birmingham) who enjoys turning raw data into clear, actionable insight — from scheduled collection and storage, to SQL analysis, BI dashboards, and stakeholder-ready reporting. Proficient in SQL and Python (pandas, NumPy), skilled at building interactive dashboards (Tableau, ECharts) and translating findings into business recommendations. Comfortable working in both English and Chinese, with a background in statistics and finance that keeps analysis grounded in real business problems.

SELECTED PROJECTS

- stock-monitor — Multi-market Equity Analysis & Daily Report System**2025 – 2026
- Built a daily equity-screening dashboard that reduces manual research time by ~90% and automatically surfaces 5+ actionable buy-zone candidates daily across 4 markets.
 - Delivered via a Flask + ECharts dashboard (candlestick charts, dual-factor radar, margin-of-safety buy zones) tracking 20+ stocks, fed by a multi-source data pipeline (yfinance with AKShare/baostock fallback; Tavily news) on a GitHub Actions daily cron with real-time Feishu alerts.
 - Cross-checked valuation growth assumptions against three independent sources (PEG-implied growth, consensus estimates, historical growth, capped at 50%) to prevent single-quarter earnings spikes from distorting results.
 - Directed the architecture and led code review while pair-programming end-to-end with Claude Code; source at github.com/VerticalFall/stock-monitor.
- obsidian-vault — Automated Global-News Knowledge Base & Daily Briefing**2025 – 2026
- Engineered a GitHub Actions pipeline aggregating four content sources (AI hotspots, tracked X/Twitter figures, hot-topic feeds, AI builders' tweets/blogs/podcasts) into a structured knowledge base.
 - Built a topic-routing pipeline that distills 100+ daily articles into a 5-minute bilingual (CN/EN) briefing, publishing 160+ editions since July 2026 at zero infrastructure cost.
 - Added automated data-integrity and pipeline-health checks to catch failures before they reached readers.

PROFESSIONAL EXPERIENCE

- Data Operations Intern — Tungee (AI sales-intelligence SaaS, ~1,000 staff)**Jun 2024 – Sep 2024
- Designed and implemented a scheduled data pipeline collecting daily KPIs (followers, views, comments) for 50+ KOL accounts on Douyin and Bilibili, replacing manual daily logging and processing tens of thousands of rows per day.
 - Built interactive Tableau dashboards and ran retention/funnel analysis on KOL content performance, surfacing trends used in weekly content reviews.
 - Turned data-backed insights into content-strategy recommendations, helping the operations team identify top-performing content formats ~2x faster.
- Research Project Member — Guangdong University of Foreign Studies**2021 – 2025
- Owned data collection for Southeast Asia sources (Thailand, Indonesia, Singapore): tourism/culture portals and government news sites.
 - Built and maintained a scheduled weekly incremental crawler (requests, MySQL) feeding full news content into a preference/labelling pipeline, improving reliability and coverage over time.

EDUCATION

- University of Birmingham — MSc, Statistical Data Science (Distinction expected)**Sep 2025 – Dec 2026
- In progress; expected Dec 2026 (degree conferral date).
 - Thesis "Sentiment Analysis of Financial News": compared generative (Naive Bayes) vs. discriminative (linear SVM) classifiers on the Financial PhraseBank dataset (4,846 sentences, 3-class, labelled by 16 finance experts) to empirically test the Ng–Jordan learning-curve theory — generative model ahead under small samples (crossover $n \approx 256-512$), SVM best on the full dataset (accuracy 0.757 vs 0.698; macro-F1 0.691 vs 0.515).
 - Ran robustness experiments on annotation-noise sensitivity and class imbalance, using class-prior/weight adjustment to raise minority (negative-class) recall from 0.151 to 0.456.
 - Coursework in machine learning, statistics, deep learning, and econometrics.
- Guangdong University of Foreign Studies — BSc, Statistics**2021 – 2025
- Key topics: probability theory, mathematical statistics, econometrics.

CORE COMPETENCIES

Data Analysis: SQL (window functions, cohort/retention, funnel analysis), Tableau, ECharts, dashboard design, automated reporting pipelines
Programming: Python (pandas, NumPy, scikit-learn), SQL, JavaScript
Data Ops: Web scraping (requests), scheduled pipelines (GitHub Actions, cron), MySQL, REST API integration
ML / AI: Classification & sentiment analysis; familiar with integrating multiple mainstream LLM providers
Tools: Git, Linux, Docker, Flask, Feishu/Lark API, Claude Code | **Languages:** Chinese (native), English (professional working proficiency)
